

TABLE OF CONTENTS

Book 1 – Variables and Number Properties

On-Ramp Assessment 1-1

Lesson A: Variables 1-7
 What is a variable?

Lesson B: Evaluating Expressions 1-17
 How do you find the value of an expression?

Lesson C: Representing Multiplication and Division 1-27
 How do you represent multiplication and division in algebra?

Lesson D: Expressions with More Than One Operation 1-37
 How do you show more than one operation in an expression?

Lesson E: The Order of Operations 1-47
 What is the order of operations and why do we need it?

Lesson F: Expressions with More Than One Unknown 1-57
 How can you use two or more variables to model real-world situations?

Lesson G: The Commutative Property 1-67
 What is the commutative property and how can it be used?

Lesson H: The Associative Property 1-77
 What is the associative property and how can it be used?

Lesson I: The Distributive Property 1-87
 What is the distributive property and how can it be used?

Lesson J: Simplifying Expressions 1-97
 How can number properties help you simplify expressions?

Off-Ramp Assessment 1-107

Book 2 – Equations and Inequalities

On-Ramp Assessment 2-1

Lesson A: Equality 2-11
 What is a balanced equation?

Lesson B: Solving Equations by Adding and Subtracting 2-21
 How do you balance an equation with addition and subtraction?

Lesson C: Solving Equations by Multiplying and Dividing 2-31
 How do you balance an equation with multiplication and division?

Lesson D: Strategies for Solving Multistep Equations 2-41
 How do you isolate a variable in more than one step?

Lesson E: Using the Distributive Property 2-51
 How can the distributive property help you simplify an equation before you solve it?

Lesson F: Applications of Equations 2-61
 When do you use equations in the real world?

Lesson G: Equations and Percent Problems 2-71
 How can you use an equation to solve a percent problem?

Lesson H: Graphing Inequalities 2-81
 What is an inequality?

Lesson I: Solving Inequalities 2-91
 How can you solve an inequality?

Lesson J: Applications of Inequalities 2-101
 When do you use inequalities in the real world?

Off-Ramp Assessment 2-111

Book 3 – Functions and Graphing

On-Ramp Assessment	3-1
Lesson A: The Coordinate Grid	3-17
How can you plot points on a coordinate grid?	
Lesson B: Equations	3-27
How is an equation related to a rule?	
Lesson C: Functions	3-37
What is a function?	
Lesson D: Rate of Change	3-47
What is rate of change?	
Lesson E: Understanding Slope	3-57
What is the slope of a line?	
Lesson F: Computing Slope	3-67
How can you use two points to compute the slope of a line?	
Lesson G: Graphing Linear Functions Using Slope	3-77
What does the graph of a linear function in the form $y = mx$ look like?	
Lesson H: Graphing Linear Functions Using Intercepts	3-87
How does changing the y -intercept of a linear function affect its graph?	
Lesson I: Applications of Linear Functions	3-97
When a linear function describes a real-world relationship, what do the slope and the y -intercept represent?	
Lesson J: Nonlinear Functions	3-107
How are nonlinear functions different from linear functions?	
Off-Ramp Assessment	3-117
